**Extreme Value Theory and Applications** J. Galambos, James Lechner, Emil Simiu, 2013-12-01 It appears that we live in an age of disasters the mighty Mississippi and Missouri flood millions of acres earthquakes hit Tokyo and California airplanes crash due to mechanical failure and the seemingly ever increasing wind speeds make the storms more and more frightening While all these may seem to be unexpected phenomena to the man on the street they are actually happening according to well defined rules of science known as extreme value theory We know that records must be broken in the future so if a flood design is based on the worst case of the past then we are not really prepared against floods Materials will fail due to fatigue so if the body of an aircraft looks fine to the naked eye it might still suddenly fail if the aircraft has been in operation over an extended period of time Our theory has by now penetrated the social sciences the medical profession economics and even astronomy We believe that our field has come of age In order to fully utilize the great progress in the theory of extremes and its ever increasing acceptance in practice an international conference was organized in which equal weight was given to theory and practice This book is Volume I of the Proceedings of this conference In selecting the papers for Volume four guide was to have authoritative works with a large variety of coverage of both theory and practice
