Transportation Engineering and Planning presents the readers with diverse sources of information and knowledge about transportation engineering and planning to help ensure that informed actions are compatible with sustainable world development. It begins with a historical analysis of transportation development since an understanding of how transportation technologies developed is a prerequisite for understanding issues involved in transportation systems and for developing sound policy analysis. Next the various chapters analyze transportation problems, discuss the state of public policy, addressing those problems, considers the causes and effects of changes in demand for mobility as the socio-economic environment changes, and then deals with the fundamental questions related to transportation. These two volumes are aimed at the following wide spectrum of audiences: from the merely curious to those seeking in-depth knowledge: University and College students, Educators, Professional practitioners, Research personnel, and Policy analysts, managers, and decision makers, and NGOs.
